OFFICE OF THE CHIEF MEDICAL EXAMINER // FORENSIC AUTOPSY

CASE IDENTIFIER:	CR-2026-1009-HOMICIDE
DECEDENT:	Jonathan Vance (Male, 42 years)
INCIDENT DATE:	2026-10-09 22:00:00 UTC (Estimated)
EXAMINING PATHOLOGIST:	Dr. Eleanor Ward, MD, FCAP (Chief Medical Examiner)
SECURITY CLEARANCE:	LEVEL 1 - UNCLASSIFIED // PUBLIC INQUEST RECORD
LOCATION OF RECOVERY:	Docklands Logistics Hub, Warehouse Bay 4, Industrial Row

1. ESTIMATED TIME OF DEATH (TOD) & VITALS

Rigor mortis and core hepatic temperature decay curve establish that the post-mortem interval places time of death between 21:45 UTC and 22:30 UTC on October 9, 2026. Lividity was unfixed when first responders arrived at 23:40 UTC, indicating minimal body repositioning post-cessation.

2. ANATOMICAL FINDINGS & MECHANISM OF DEATH

Primary cause of death is traumatic asphyxiation accompanied by comminuted parietal contusions inflicted by a heavy blunt instrument. Subgaleal hemorrhage is evident along the posterior occiput. Pronounced defensive lacerations are documented across the dorsal surfaces of bilateral forearms.

3. FORENSIC TRACE RECOVERY & LAB IMPRESSIONS

Subungual scraping from decedent's left hand yielded foreign textile microfibers. Spectrophotometry identifies them as cobalt-blue synthetic nylon-polyester upholstery fibers, typical of high-end SUV automotive interiors. Partial epidermal epithelial cells recovered; DNA amplification initiated.
